

# CHULUKA

A Zambian Governance Foundation Initiative

# ABOUT US

Chuluka Limited is a social enterprise, under the parent company – Zambian Governance Foundation, which aims to address social and environmental challenges by providing affordable, reliable and sustainable solutions through a financially sustainable business model. Chuluka’s focus areas include: energy, agriculture, environment, governance, and ICT. Established in 2017, Chuluka uses two primary mechanisms to achieve its goal: by selling products aimed to further the quality and lifestyle of Zambians, and by providing services to organisations to function better. The social enterprise is built on ZGF’s existing work and aligns closely with our values and mission.

# TRAINING & CONSULTING

We are passionate about training others using our tools and approaches developed by our parent organisation ZGF for long-term impact. At Chuluka, we offer a wide range of training packages which can be delivered as public workshops or tailored in-house events. The fee-based trainings are applicable to organisations in various sectors and provide the opportunity for organisations to strengthen their capacities on 'soft-skills' and enhance their operations.

The training methodology is a combination of expert input, interactive practical exercises, hands-on role-play, group discussions, case studies, practical projects, videos and group presentations. Our seasoned trainers have been delivering these trainings for several years now, delivering highly interactive sessions that incorporate small-group exercises, self-assessment, imagery, role playing, and the latest learning techniques to imprint knowledge for lasting results.

# SOFTWARE DEVELOPMENT

The power of the internet as a means of communication has now become an integrated part of societies and this can largely be harnessed by organisations having online presence. New Information and Communication Technologies (ICTs) are changing the way in which organisations communicate, share information and advance social development.

These tools present organisations with exciting new opportunities to raise awareness about their work, connect with a wide range of individuals and potential funders, raise money and find volunteers, both locally and internationally. Despite these benefits, however, it is still a huge challenge for many organisations to adopt and apply these tools. Cognisant of these challenges, Chuluka offers ICT solutions that facilitate access to information and increase organisational profile

# ENVIRONMENTAL SOLUTIONS

Chuluka has partnered with VITALITE Zambia and Bio-Carbon Partners to serve as a role-model in using environmentally-friendly, and reliable, energy efficient products, as well as educating communities, businesses and other CSOs on the long-term effects of using these products.

As a result, Chuluka is currently offering these exciting products aimed at tackling energy and environmental challenges both in the urban and rural areas, including:

- Eco-Charcoal
- Mbaula Jet
- Mbaula Fresh
- The Solar Home System
